EDUCATION

Farmingdale State College | Long Island, NY **May 2026**
***B.S. Computer Science* | GPA: 3.81/4.0**

- **Relevant Coursework:** Data Structures & Algorithms I-II, Operating Systems, Computer Networks, Computer Architecture, Data Management (SQL), Software Engineering, Principles of Programming Languages, Applied Probability & Statistics
- **Honors:** Magna Cum Laude; President's List; Dean's List; 3x 1st Place – Cybersecurity Capture the Flag (CTF), 1st Place – Hackathon Winner (Corpo)

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, Scikit-learn), Java, SQL, JavaScript, TypeScript, Kotlin

Frameworks & Tools: FastAPI, Node.js, React, Azure SQL, Firebase, MongoDB, Microsoft Power Platform, MediaPipe, Git, Linux

EXPERIENCES

Farmingdale State College – Office of Distance Learning **October 2025 – Present**
Distance Learning Help Desk Technician

- Built automation workflows using **Microsoft Power Automate**, integrating **Microsoft Forms** and **ServiceDesk Plus** to reduce manual ticket handling and improve response efficiency
- Designed dynamic auto-response templates using variable-based logic to improve response consistency and reduce repetitive manual effort
- Reduced ticket completion time and standardized communication across campus-wide helpdesk operations
- Performed data analysis on service desk metrics using Power BI dashboards to identify workflow optimization opportunities
- Automated service workflows reducing manual processing and improving system efficiency across campus operations

DataAnnotation - Remote **August 2023 – 2026**
Software Developer – AI Consultant

- Evaluated and audited thousands of large language model outputs to identify failure patterns and improve model reliability
- Designed structured **JSON** schemas and validation logic for large-scale data processing workflows
- Classified model behaviors and curated datasets to improve evaluation reliability and training data quality
- Contributed to proprietary model evaluation workflows to assess reasoning consistency and improve response reliability

Farmingdale State College – Department of Computer Science **January 2024 – Present**
Teaching Assistant - Data Structures & Algorithms I, Programming: Python, Programming: Java

- Delivered instruction to **200+** students across multiple semesters in **Java** and **Python**, covering recursion, arrays, lists, stacks, heaps, and algorithmic time/space complexity
- Developed structured lesson plans and led instructional sessions reinforcing implementation strategy and debugging methodology
- Collaborated with faculty to refine and optimize programming assignments to improve conceptual clarity and learning outcomes
- Held weekly office hours to guide students through complex algorithmic problem-solving

Video Game Trading Post – Long Island, NY **August 2018 – September 2024**
General Manager

- Directed multi-location retail operations, overseeing staffing coordination, logistics, and financial reconciliation
- Leveraged multi-store performance analytics to optimize product allocation and improve inventory turnover
- Managed vendor relationships and purchasing strategy to align supply with regional demand trends
- Spearheaded physical setup and operational launch of new store locations from ground-up execution

PROJECTS

OpenHand – Real Time ASL Recognition System – *Python, FastAPI, Scikit-learn, MediaPipe, Kotlin, React, Firebase*

- Architected a real-time ASL recognition pipeline using **MediaPipe** (21 landmarks) and **RandomForestClassifier** trained on tens of thousands of curated samples
- Achieved **~95%** real-time classification accuracy with live inference via **FastAPI** and **WebSockets** across **Android** and web clients
- Implemented **Firebase**-based authentication, progress tracking, and leaderboard systems for persistent user learning

Corpo – Corporate Translator (1st Place Hackathon Winner) – *React, Python, Gemini API, Supabase, Vercel*

- Developed a full-stack AI application that translates contracts, leases, and financial agreements into clear, understandable language
- Engineered prompt workflows to generate structured outputs including summaries, key terms, and risk factors
- Delivered a fully functional product within a constrained hackathon timeline, earning 1st place in competition

Circuit Simulator – Event-Driven Electrical Modeling System – *Java/JavaFX, MySQL, Azure Blob Storage*

- Engineered **20,000+ line** object-oriented simulation modeling voltage/current flow with event-driven state propagation and cloud-based persistence
- Designed relational database schema and **JSON** serialization structure to support normalized data persistence

Jobby – Job Application Tracker (Chrome Extension) – *TypeScript, Chrome Extension API, Local Storage*

- Built and deployed a Chrome extension to track job applications across LinkedIn and Indeed with one-click capture
- Engineered DOM parsing logic to extract structured job data from dynamic, inconsistent page layouts using local storage
